Kinetic Payment Systems Announces Dual Secure Datacenter Infrastructure, Euronet REN Integration, and Aggressive 25,000 ATM Growth Target

PHILADELPHIA, PA — November 12, 2026 — Kinetic Payment Systems, a premier Philadelphia-based private financial services organization, has announced a massive expansion of its core infrastructure. The company is currently building fully secured state-of-the-art datacenters in **San Diego, California**, and **Philadelphia, Pennsylvania**, to host, manage, and scale its advanced financial platforms nationwide.

Alongside this major infrastructure investment, Kinetic Payment Systems is integrating Euronet REN products and services into its financial ecosystem. This technological upgrade bolsters the company's capability to deliver high-performance transaction processing and support its rapid, large-scale growth going forward.

Maximizing ATM and POS Revenue Potential

Kinetic Payment Systems specializes in transforming traditional ATM and Point of Sale (POS) hardware into high-yield revenue centers. Serving a diverse clientele that includes Independent Sales Organizations (ISOs), credit unions, banks, and retail operations, the company utilizes creative development teams to introduce profitable new revenue streams to existing terminal deployments.

The company's ever-expanding portfolio of value-added products and services includes:

- **Verified Digital Advertising:** High-engagement ad delivery featuring verified sets of eyes per view, complete with exact timestamps and duration tracking.
- **Dynamic Language Presentation:** Automated text matching tailored to the cardholder's specific debit or credit card profile during payment transactions.
- **Integrated Self-Service Options:** Seamless bill payment processing, event venue ticket disbursement, and transit bus ticketing.
- **Charitable Giving:** Built-in micro-donation features enabling direct contributions to charitable organizations.

Proven Leadership and an Ambitious Three-Year Goal

This accelerated expansion is anchored by the deep industry expertise of the company's founder. With a legacy of disruption in the payment space, the founder's historical track record includes launching Philadelphia-based Credit Card Center, which—following two years of aggressive deployment—became the largest ISO in the United States in 1999. Reflecting on this background

of market-leading success, the founder states emphatically: *"It's not magic. It's just different from everybody else."*

Building on this proven methodology, Kinetic Payment Systems has established an aggressive corporate milestone: **reaching 25,000 active ATM installations and support services over the next three years**.

"By establishing bi-coastal secure datacenters in San Diego and Philadelphia, and integrating industry-leading platforms like Euronet REN, we are putting the ultimate technological infrastructure behind our vision," said the executive leadership team at Kinetic Payment Systems. "We are empowering financial institutions, credit unions, and independent operators to unlock unprecedented value from their terminals."
